

A Day in the Life in Physics at Ohio State University

Purpose

“A Day in the Life in Physics at Ohio State University” is a blog aimed at giving young people, especially females, a sense of what it is like to live a life in physics. We aim to have a wide variety of perspectives by bringing in writers of different backgrounds, education levels, and genders to tell a story of their daily life or something or someone that has inspired them.

Impact

Since our first post in July 2012 we have posted bi-monthly on topics that typically fall into one of three categories: personal stories, scientific explanations, or research experiences.

Our site has been viewed in over 124 countries with more than 25,000 total views. We get over 1,000 unique visitors every month.

Several of our blog posts have been advertised on the National Science Foundation news site <http://news.science360.gov/files> and we can be found on Twitter at @ADitLatOSU and on Facebook at <https://www.facebook.com/ADayInTheLifeInPhysicsAtOSU>

Ohio State Colleges/Units Involved

Department of Physics
Department of Astronomy

Community Partners Involved

Center for Emergent Materials

Funding

NSF CAREER grant PHY-1255557
